# MakeMeMobile expands its operations, creates new division

Mobile enterprise solutions provider MakeMeMobile is expanding its operations, moving premises to house its growing team and to accommodate its larger mobility helpdesk and national repair centre.

Over the last 12 months, MakeMeMobile has deployed multiple mobility solutions based on Honeywell's Movilizer cloud-based mobility platform. Honeywell Movilizer, designed for field operations, drives enterprise profitability across an organisation by deploying nimble and dynamic solutions across all types of mobile devices.

## New division

Honeywell Movilizer solutions have been deployed across multiple enterprise back-end systems, including SAP. In response to market demand, MakeMeMobile has created a new division called M3 Enterprise to focus on Honeywell Movilizer solutions in the SAP environment. According to MakeMeMobile's director, Andrew Fosbrook, this division will focus on extending SAP functionality onto mobile devices, as well as providing SAP integration.

This is the second major expansion that MakeMeMobile has undertaken in the past 18 months to meet the demand for mobility solutions across the retail, FMCG, transport and logistics, and industrial markets.
