

## Drinkable water produced from a billboard

Capital Lifestyle Magazine reported today, 8 August 2013, that engineers in the city of Lima, Peru, "have found a way to use the intense humidity to produce drinkable water from a billboard." (video)

Capital Lifestyle Magazine: World's best billboard makes drinkable water out of thin air... This is great news for
residents of Lima, who are "situated in one of the driest deserts in the world", but even better news and a glimpse of
hope for Kenyans living in a country with a shortage of clean water and thousands of billboards that could be utilised
for this purpose.
