

Aquatunes provides shower singers with backing tracks

Whether it's singing along to your favourite song in the shower, starting your day by catching up with the news on the radio, or relaxing in the bath, the Aquatunes waterproof Bluetooth speaker from Grohe and Philips Sound will enhance your experience.

The speaker is the result of collaboration between two brands with a strong record of accomplishment of innovation: Grohe, the bathroom and shower experts and Philips, a leading brand in audio systems. Just pair the speaker with your smartphone or tablet and enjoy your favourite music, radio station or any other source of audio. Aquatunes has been designed from the ground up to be a great-sounding, good-looking addition to your bathroom.

Aquatunes is as simple as it is ingenious. With its form designed by the Grohe Design Studio, the loudspeaker does not take up any shelf space. Just attach its holder directly to the shower rail, lock it in place and turn it on to enjoy the music. The organic, round shape of the speaker is reminiscent of the brand's most popular hand showers.

It is easy to connect the speaker by pairing it with any smartphone, tablet or Bluetooth-enabled device, and with a range of up to 10 metres, it is simple to keep the playing device safe and dry. CE-certified and 100% waterproof, the loudspeaker easily withstands not only the jets of water but can also handle falls from a height of up to 1.5 metres.

Thanks to its anti-slip holder, the wireless loudspeaker can be used on all shower rails with a diameter between 20 and 25 millimetres. This means it will sit securely on 70% of all shower rails and is suitable for other places. To recharge, just remove it from the shower rail and place it in its handy charging station. The multifunctional dock also serves as a holder for the loudspeaker, which means that the battery can be recharged while still listening to music.

Keeping things simple under the shower, it has clearly marked buttons - on/off, volume up/down, previous/next track and for Bluetooth pairing. Two LEDs show the status of the Bluetooth connection, whether the loudspeaker is on as well as the battery status, all the information you need at first glance.
