

Ericsson, Cisco combine technologies to introduce EWN

Ericsson and Cisco have expanded their strategic partnership with the introduction of Evolved Wifi Networks (EWN), a new wifi offering. This new offering is the result of a combination of Ericsson's 3GPP access, core networks and applications with Cisco's wifi portfolio.

Ericsson's services organisation is to manage the design and deployment of solutions based on EWN while Cisco will provide its product support. EWN has the capacity to be offered in more than 180 countries.
