

MasterDrive, ProActive SA make vehicle recovery easier

MasterDrive has partnered with ProActive South Africa, an intelligence sharing database, in an aim to recover stolen vehicles faster.

After someone is hijacked they can use a website to send out details about their vehicle to a database of over 137 security service providers and enforcers.

Ryno Schutte, ProActive South Africa's managing director says that the release of the important information so quickly along with the hard work of various security providers allows for successful outcomes.
