

Cellcom looks to Parallel Wireless for network expansion

Wisconsin-based wireless carrier Cellcom has selected Parallel Wireless for its network expansion. Cellcom intends on using Parallel Wireless' technology to make deployments easier and more cost-effective as Wi-Fi to connect consumer and business subscribers.

Parallel Wireless' low cost, low footprint, and virtualised multi-technology solution will help Cellcom deliver coverage by making deployments easy and affordable to install and maintain, and by enabling it to upgrade to any future technology without any additional hardware.
